

My Pregnancy App: Design Analysis & How We Borrow It

What Shelbi loves about the app she recommends — decoded into 8 design signatures, and a concrete plan for bringing the same feel into the TJB app without losing our identity.

Prepared by Kit · September 12, 2026 · For: Jeff · Source: app's real UI + App Store presentation, analyzed at full resolution

1. What the app is

My Pregnancy | Tracker & App — a completely free, week-by-week pregnancy tracker by developer Aleksei Neiman. No subscriptions, no in-app purchases, no ads. Recently redesigned for iOS 26.

Why Shelbi loves it (from real user reviews): *"I love the simplicity of this app. Each week it gives you a little date about 'baby', 'mom', and 'useful advice' tips."* Another reviewer: *"the weekly and daily articles are some of the highest quality I've seen."* It's calm, private, and never pressures you to buy anything.

The core loop: open the app → see *your week* → read what's happening with baby + mom this week → use a tool (kick counter, contraction timer, weight tracker, trimester to-do lists). Content arrives in small weekly portions — the app never dumps everything at once. That rhythm is what creates the daily-open habit.

2. The design DNA — 8 signatures

Actual in-app UI: main screen

Actual in-app UI: week detail

App Store presentation style

01

A calm gradient world with soft bokeh

Light sky-blue gradient with translucent white circles floating in it. Every screen feels airy — nothing shouts.

02

One idea per card

White cards, moderately rounded, no borders, soft shadows, generous padding. A card shows a single module — due date + progress ring, remaining days, this week's article, baby dimensions.

03

The week is the spine

The whole app hangs off "Week 10" as a hero label. A horizontal week stepper (circular buttons) with the current week highlighted lets her browse any week.

04

Baby ↔ Mother duality

A bottom toggle switches between "Baby" and "Mother" views. Every week has content for both, plus a third "useful advice" layer.

05

Data made tangible

Baby dimensions as a clean 3-column row (Length · Weight · "size of a prune"), a circular progress ring instead of bars. Numbers feel personal, not clinical.

06

Rounded type, strict hierarchy

Bold rounded sans-serif titles, regular body, ~3 text levels per screen. No serif anywhere. Size steps do the hierarchy work.

07

One saturated accent per module

Coral STOP button, mint kick circle, pink icon circle, orange active week. Everything else neutral — so each

08

Delightful micro-illustrations

Soft 3D fetus in a translucent sac, friendly clipboard, footprint icon. Small, warm, consistent — never clip-art.

action feels obvious and inviting.

Emotional tone: a gentle companion — calm, nurturing, reassuring, optimistic. It respects an anxious, tired, overwhelmed reader.

3. Why it works (the transferable principles)

- **Rhythm over volume.** Weekly portions create a habit; the user never feels behind.
- **Calm = trust.** Soft palette, whitespace, and single-focus cards lower cognitive load for a stressed audience.
- **Progress is always visible.** Progress ring, days remaining, week stepper — she can feel herself moving forward.
- **Both of them matter.** Baby content AND mom content, clearly separated.
- **Zero-pressure positioning is part of the design.** "No subscriptions / No IAP / No ads" are rendered as beautiful trust-badge cards, not fine print.

4. How we incorporate it into the TJB app

We keep our identity (warm cream, dusty rose/lavender/sage, hand-drawn illustrations, our serif headline moments) and adopt their **structure and discipline**:

MOVE	WHAT CHANGES IN TJB
1 · Adopt the week spine	Reorganize the mom dashboard around "Your week N" — hero week label + horizontal week stepper. Our Weekly Tip, Weekly Affirmation, and weekly article cards bind to the current week and become browsable week-by-week. This is exactly the experience Shelbi described loving.
2 · Baby ↔ Mother toggle	Per-week content view with "For baby" / "For mom" tabs — plus our third lane, "For your birth" (education + birth-plan prompts). Mirrors their most-loved duality while staying distinctly TJB.
3 · One-idea-per-card	Audit every dashboard card: if it holds two ideas, split it. Kill the remaining left-edge accent bars (already agreed in the design refresh) — use single accent <i>elements</i> inside the card (rose progress ring, sage checkmark) instead.
4 · Progress made tangible	Replace bar-style birth-plan progress with a soft circular progress ring in rose, plus "days until your due date" as its own calm card.
5 · Tangible data moments	Where weekly content covers fetal development, add a 3-column data row (length · weight · "size of a ...") in our own hand-drawn illustration style.
6 · One accent per action	Borrow their CTA discipline: exactly one confident accent per module (e.g., lavender ring button for the primary weekly action); everything else stays neutral.
7 · Micro-illustrations, not stock	Their soft 3D fetus is their identity move; ours is the approved hand-drawn spot-illustration system (lavender sprigs, teacup, gentle hands). Every weekly article card gets one small illustration.

5. What NOT to copy

The sky-blue palette. It's their identity; ours is warm cream + rose + lavender. Adopting blue would dilute us and clash with every existing TJB asset. Structure yes, color no.

3D rendered fetus imagery. Off-brand for our hand-drawn editorial aesthetic — and rendered baby anatomy is a trust risk under our AI-image policy. Hand-drawn interpretations instead.

Weight-centric tracking. Their most common criticism in reviews ("shamey and insulting"). TJB differentiates: body-neutral, judgment-free content is a positioning win.

Week rounding. Users complained "5w2d shows as 6 weeks." We display exact week + days.

6. Recommended next step

Build **one HTML mockup of the TJB mom dashboard restructured on the week spine** — week stepper + Baby/Mom/Birth toggle + rose progress ring + single-focus cards with micro-illustrations — in our existing palette, shown side-by-side with the current dashboard. Same test-subsection approach as the running design refresh. My Pregnancy proves the pattern works for this exact audience; the win is applying it inside our warm editorial identity.
